

Intura®

Enterprise

Collecting, synthesizing, and communicating vital business information across your organization is a major challenge. **Intura Enterprise™** solves this by offering easy access to all of your restaurant data through a secure, web-based interface from anywhere in the world.

Intura Enterprise™ is a corporate communications portal and data warehouse for your multi-unit

**Control Information...
Decide the Future!**

restaurant organization providing business operations decision support and disaster recovery all in one affordable package. **Intura Enterprise™** provides individual, consolidated and comparative management reports by seamlessly connecting all of your restaurants using the **Intura Vision™** point-of-sale solution.

With **Intura Enterprise™**, you can have the same insight to your restaurant operations with none of the hassle and a fraction of the cost paid by large corporations. Without expensive software and hardware to purchase and maintain, you can focus on what you do best—delivering a high-quality product and top-notch customer

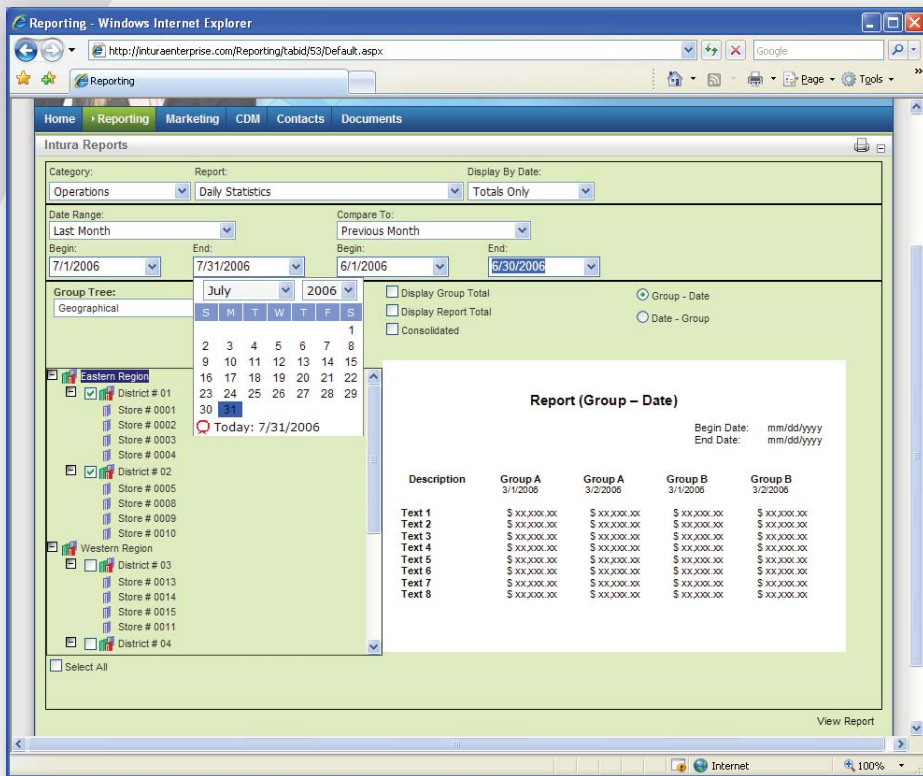

service in a highly competitive marketplace.

Increasing efficiency through centralized restaurant data, improving decision support, enhancing corporate communications and professional customer service are some of the reasons why **Intura Enterprise™** brings so much value to your organization. Begin taking advantage of **Intura Enterprise™** today by calling **866.405.9250** or visiting **www.intura.com**.

Information Management

- Access **Intura Enterprise™** from the internet at any time.
- Define user's security access to restaurant sites and reports.
 - Individual, comparative and consolidated multi-site reports that include sales, operational, inventory, payroll, financial, product mix and many others.
 - Group administrators can create multiple master and sub-groups for reporting on regional, geographical and/or organizational data sets.
- Microsoft SQL Server data is fully replicated using our exclusive **Intura Exchange** technology.

Corporate Communications

- Dynamically customize content to create your own corporate extranet.
- Communicate with your management and employees using built-in tools for events, announcements, surveys and newsletters.
- Document management for online access to operational procedures, training manuals, product rollouts, HR policies, multi-media materials and franchise guidelines.
- Moderate discussion forums to generate open dialogue on important topics such as sales building, cost cutting, management techniques and industry trends.
- Customers can choose to operate on a shared portal site or select their own domain name such as www.mycompany.net.
- Choose required document storage space with dedicated domain option.

Managed Hosting Services

- Restaurant data is compressed and encrypted then sent via dial-up or broadband connections.
- Critical business data is located in a secure data center with 24/7 technical administration including hardware, operating system and applications support.
- Fast and reliable internet access backed up by three redundant fiber entry points with minimum DS3 level connectivity through Tier 1 providers.
- Data center is powered through intersection of three separate metropolitan power grids supported by 5,000 gallon, diesel generated standby power.
 - Environmental systems including HVAC and fire suppression are precision calibrated and operated at optimum levels.
 - Controlled access to all entry points with multi-layered physical and electronic security system, security team and video surveillance.
